THE PROBLEM

“1 tab BD PRN”

Elderly Malaysians cannot understand the shorthand on their pharmacy labels. It is explained once at the counter, then they are home alone.

Missed doses

No one left to ask.

Double doses

Unclear what “BD” means.

Wrong timing

Before or after food?

WHO IS AFFECTED

4.2M

Malaysians are aged 60+, 1 in 8 of the population (DOSM, 2026)

THE SOLUTION

Photo in, plain language out

How it works

1 Snap, don’t type

Pick English, Malay, Tamil or Mandarin. Upload a photo or PDF. No account, no prompt.

2 Plain words, label only

Decodes BD, TDS, PC into simple steps beside the printed text. Unclear photo? It stops.

3 Remind and refer

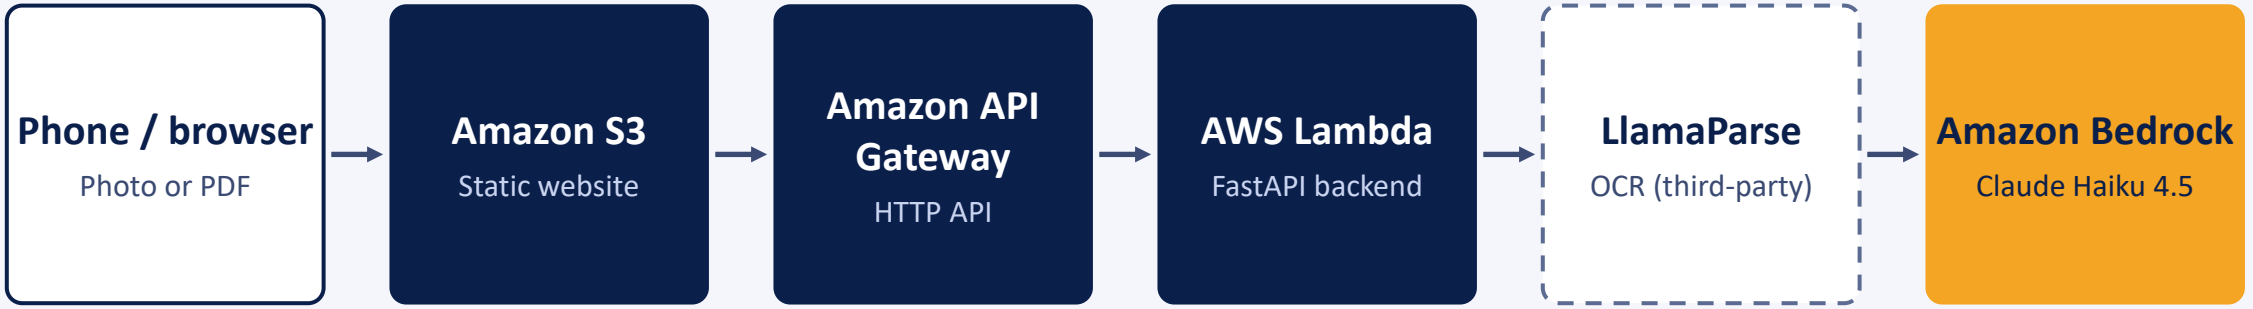

Reminder times they can edit or switch off. Not sure? “Ask your pharmacist.”

Why UbatJelas, and why not what people use today?

	Chatbot	Google image translate	UbatJelas
Effort	You type your own question	Photo in, translated words out	**Pick a language, snap a photo**
Shorthand	Only if you ask the right way	Translates words, does not decode BD / PRN	**Decodes BD, TDS, PC into plain steps**
Safety	May add advice the label never printed	No checks, no “ask your pharmacist”	**Label only. Unclear photo stops**
Reminders	None	None	**Editable reminders**

BUILT ON AWS

Amazon Bedrock at the core

Dashed box = third-party service

Why Claude Haiku 4.5

Fast and low cost on Bedrock, so the answer is back while the user is still holding the phone. Replies in English, Malay, Tamil or Mandarin.

How we keep it safe

Prompted to explain only what is printed on the label. If the photo is unclear, it stops. When unsure: “Ask your pharmacist.”

Deployed as code

AWS SAM (CloudFormation) and GitHub Actions deploy the whole stack the same way every time, so each new pilot can reuse it.

THE IMPACT

Understand your medicine, in your own language

MEET PAK HASSAN, 72 (PERSONA)

Five medicines. Labels full of BD, TDS, PC. He used to wait for his daughter to explain them. Now he snaps a photo and reads it in Malay, with reminders he can edit.

WHAT USERS TOLD US

"Explains medicines and prescriptions in simple language, in a language I understand."

"Very helpful app. It makes things much easier for me."

FIRST PILOT: KLINIK KESIHATAN

1,131 government health clinics (MOH, Dec 2024). Elderly patients collect long-term medicines there. A QR code at the pharmacy counter is all it takes, with no system integration.

HOW IT GROWS

Who: 4.2M Malaysians aged 60+ (DOSM, 2026)

Where: clinic by clinic, then community pharmacies

Cost: about 4 sen per scan, pay per use

Next: in-app guide and multi-file upload, both asked for by users
